Now its even easier to get the Best German made machinery

The 'One Off' 30% Federal Government Tax Deduction combined with Interest rate falls means you can afford the best equipment right now to secure your companies long term future.

Don't miss out!
Orders for new equipment must be in place before June 30th to qualify for the 30% tax deduction allowance

“In terms of Investment opportunities for Capital Equipment there has never been a better time for business to invest in machinery as Government allowances like this only come along once in a blue moon.”

Nest 'BIG' with Weekes new 'COMPACT COST' system

Weeke the CNC specialist of the German Homag Group have extended their nesting range in 2009 with a new 3600 x 1800mm capacity 'dedicated to nesting' solution. This focused specification has resulted in an automated load, nest and unload system with a 20% reduction in your investment.

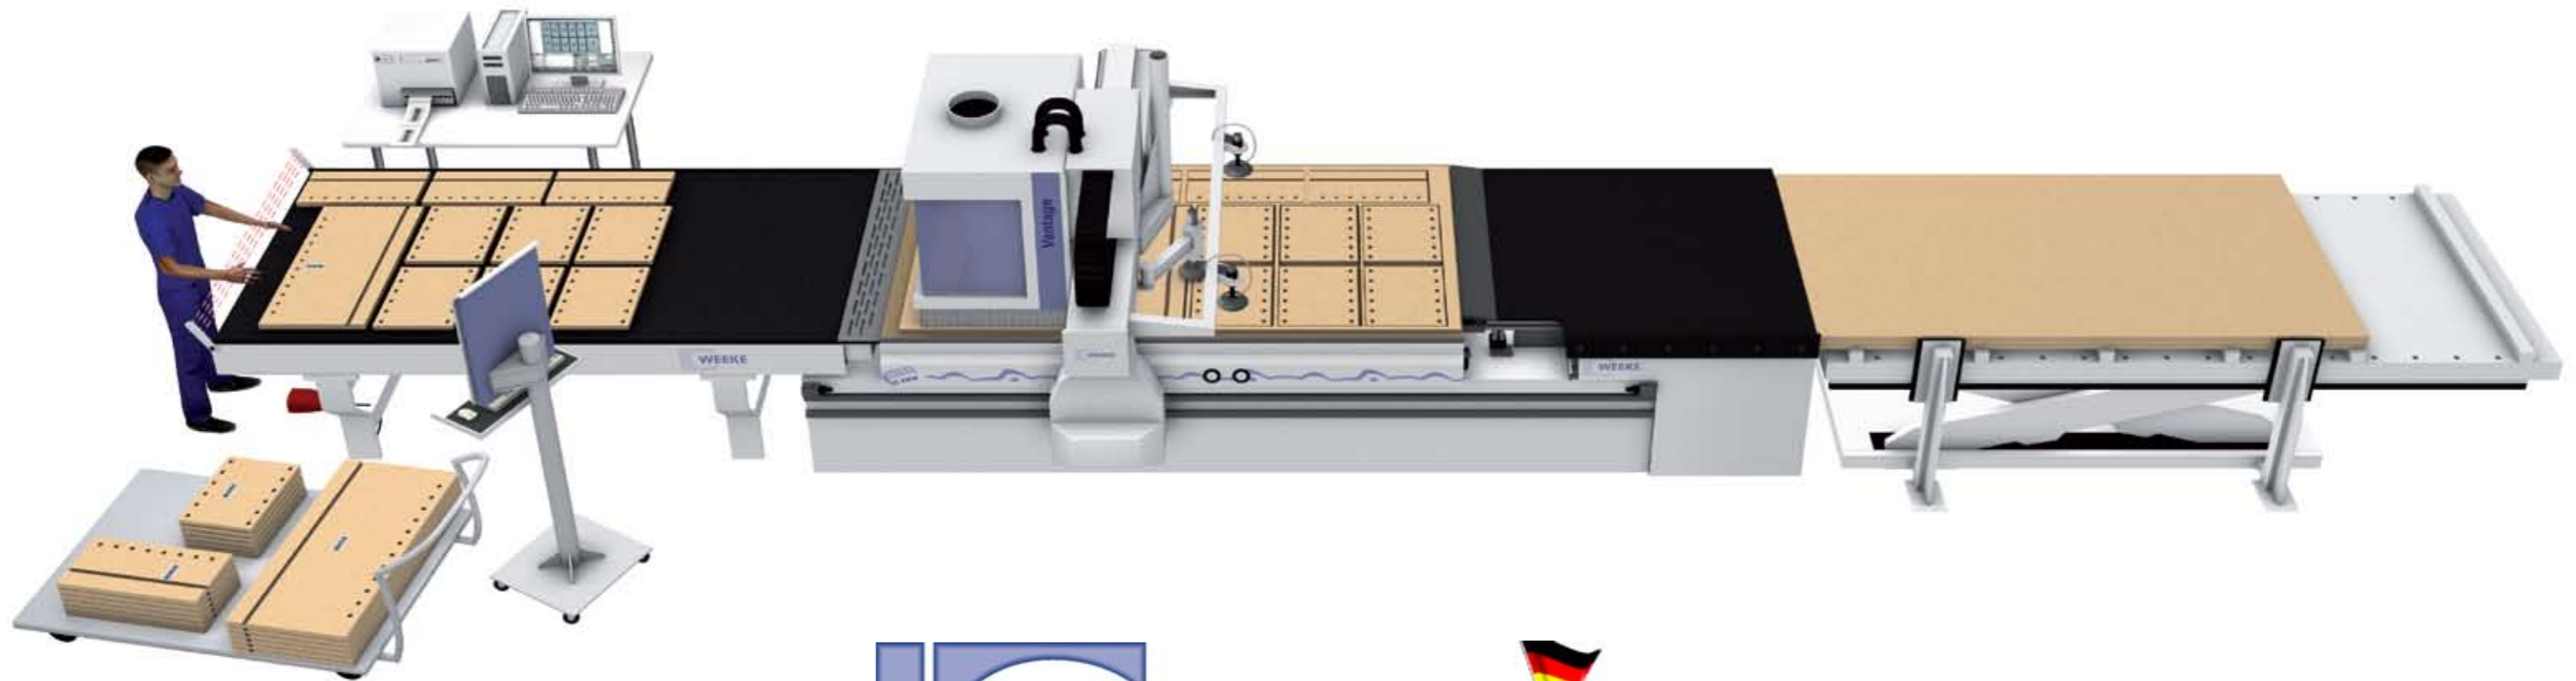

Twin scissor lifters provide a 'full sized' platform for auto loading of all sheets sizes (Bulky components like this are manufactured locally in Australia to reduce costs).

The Weeke auto loads itself from this lifter and then completes the nest routing and drilling with the speed and precision Weeke are famous for. The patented 'locked' drilling system with fully variable speed drills to exact depths at faster speeds. All the familiar Weeke stand out technology like their twin 'Z' axis and twin 'X' axis drives with fibre optic communications are found on the new machine.

The nest is completed in quick order then pushed onto the driven conveyor out-feed which drives the components to the unloading position stopping them automatically via a light barrier. Now they lie within easy reach of the operator. And now the new 'just in time' label system comes into play producing labels at the nesting machine and just for the actual sheet of material being nested at the time. It is a nice alternative to printing a sheath of label sheets and cover sheets in the office for each job. These can get to be quite a handful for bigger jobs.

Finding the right label for each component is easy as its clearly shown on a graphic of the entire nest printed right there on each label. This gets rid of the need for a printed layout master sheet for that nest. Easy and foolproof!

The complete system offers the material savings and versatility of a full 3600 x 1800mm capacity machine with Weeke quality at a new and significantly lower price point.

The new class leader has arrived...

For the past decade Brandt's '300' series has been undisputed leader in the small edgebander segment. The worlds most successful and respected compact edger. It's a hard act to follow and something only Brandt themselves could do. And now they have - with the all new '200' series. All the best loved features of the 300 alongside a whole raft of new innovations. This is a real 'wow' machine packed with the best German technology and clever ideas. Here's just a few...

Patented 'dust flow control' tooling - much cleaner than the others. The heaviest feed track in its class - same as you find on a \$200,000 Brandt!. Contact free glue roller - no contact, no wear, no problems! Patented twin end saw design, patented tool geometry (no shared cutting points) Auto glue temperature monitoring, recycling and new tank design with glue circulation without 'hot spots'. We could go on - there's lots more but hey, you get the idea. But we should mention that you get all this at an investment below the '300' series it replaces. That puts a real shine on the new Kings crown!

Nest friendly solutions, Diamond premiller options, New levels of 'easy' controls and settings. Small but tough and the perfect 'compact' edger for the quality driven workshop.
